

# **FUSE TECH** **HOT TECH**

## **FURNACE INSPECTION**

The Fuse Tech / Hot Tech group offers high temp furnace inspections thru the use of water cooled periscopes. The owner is then able to view areas or actions that may not be visible through normal "line of sight" observations.

This equipment has video capability that allows recording on video tape with sound, thereby making it possible to "voice over" and describe the area or action being observed. This would include firing characteristics of burners, bubbler effect and batch melting characteristics.

Pictures on CD for powerpoint type presentations are also given, if desired, that can be used in meetings with management to describe furnace conditions and the need and method of repair if necessary.

Information of this type makes excellent historical records to be reviewed and updated over the campaign life of the furnace.

Call us for more information if we can help you in these areas
